

Klimamodellering for Arktis - specifikt Grønland

J.H. Christensen, G. Aðalgeirsdóttir*,
K.K. Andersen, F. Boberg,
P.L. Langen, K.S. Madsen,
R. Mothram og M. Stendel

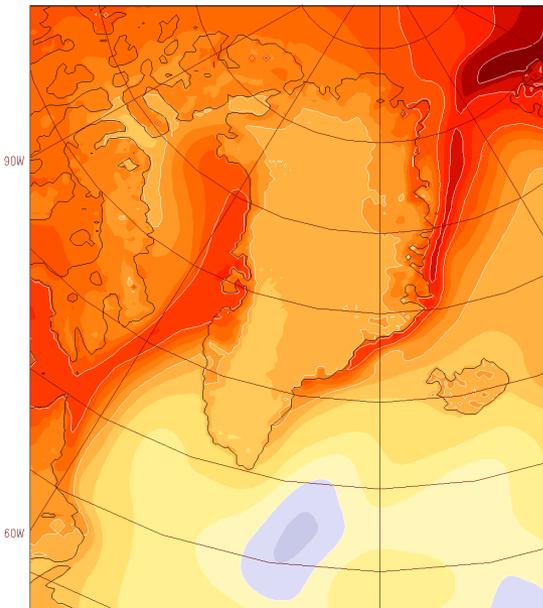

DMU

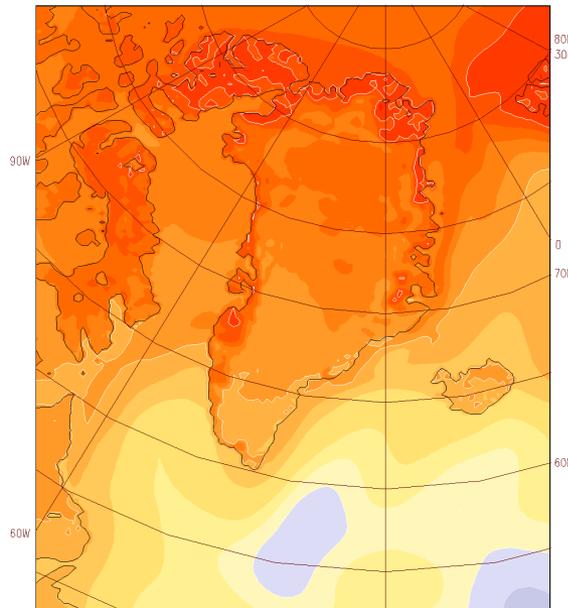

Temperatur (2051-2080) - (1961-1990)

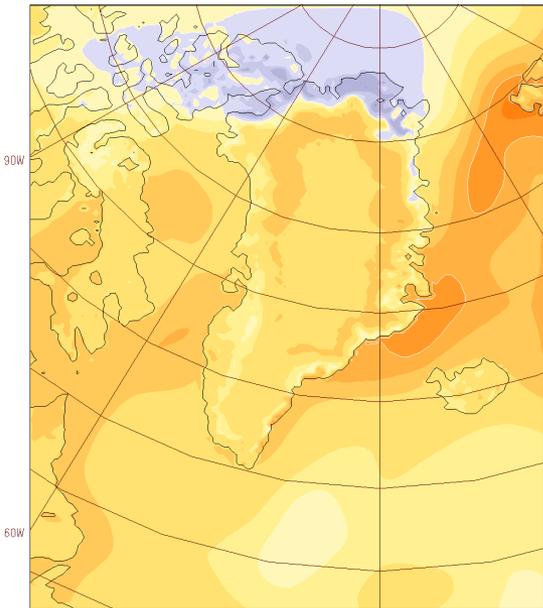

T2m [K] DJF (2051-2080)-(1961-1990)

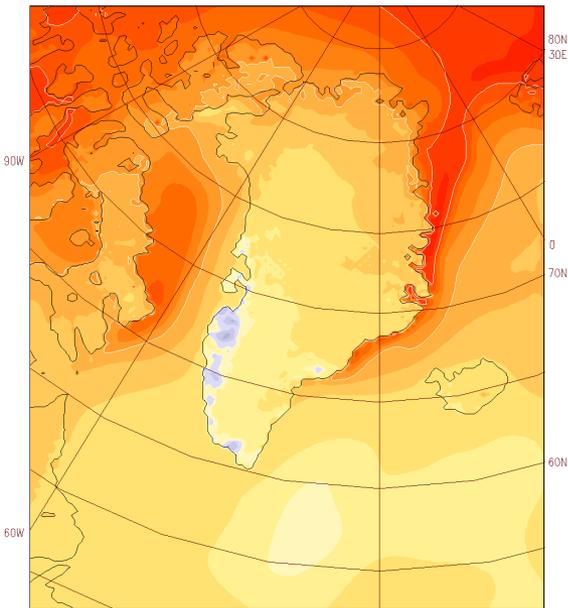

T2m [K] MAM (2051-2080)-(1961-1990)

T2m [K] JJA (2051-2080)-(1961-1990)

T2m [K] SON (2051-2080)-(1961-1990)

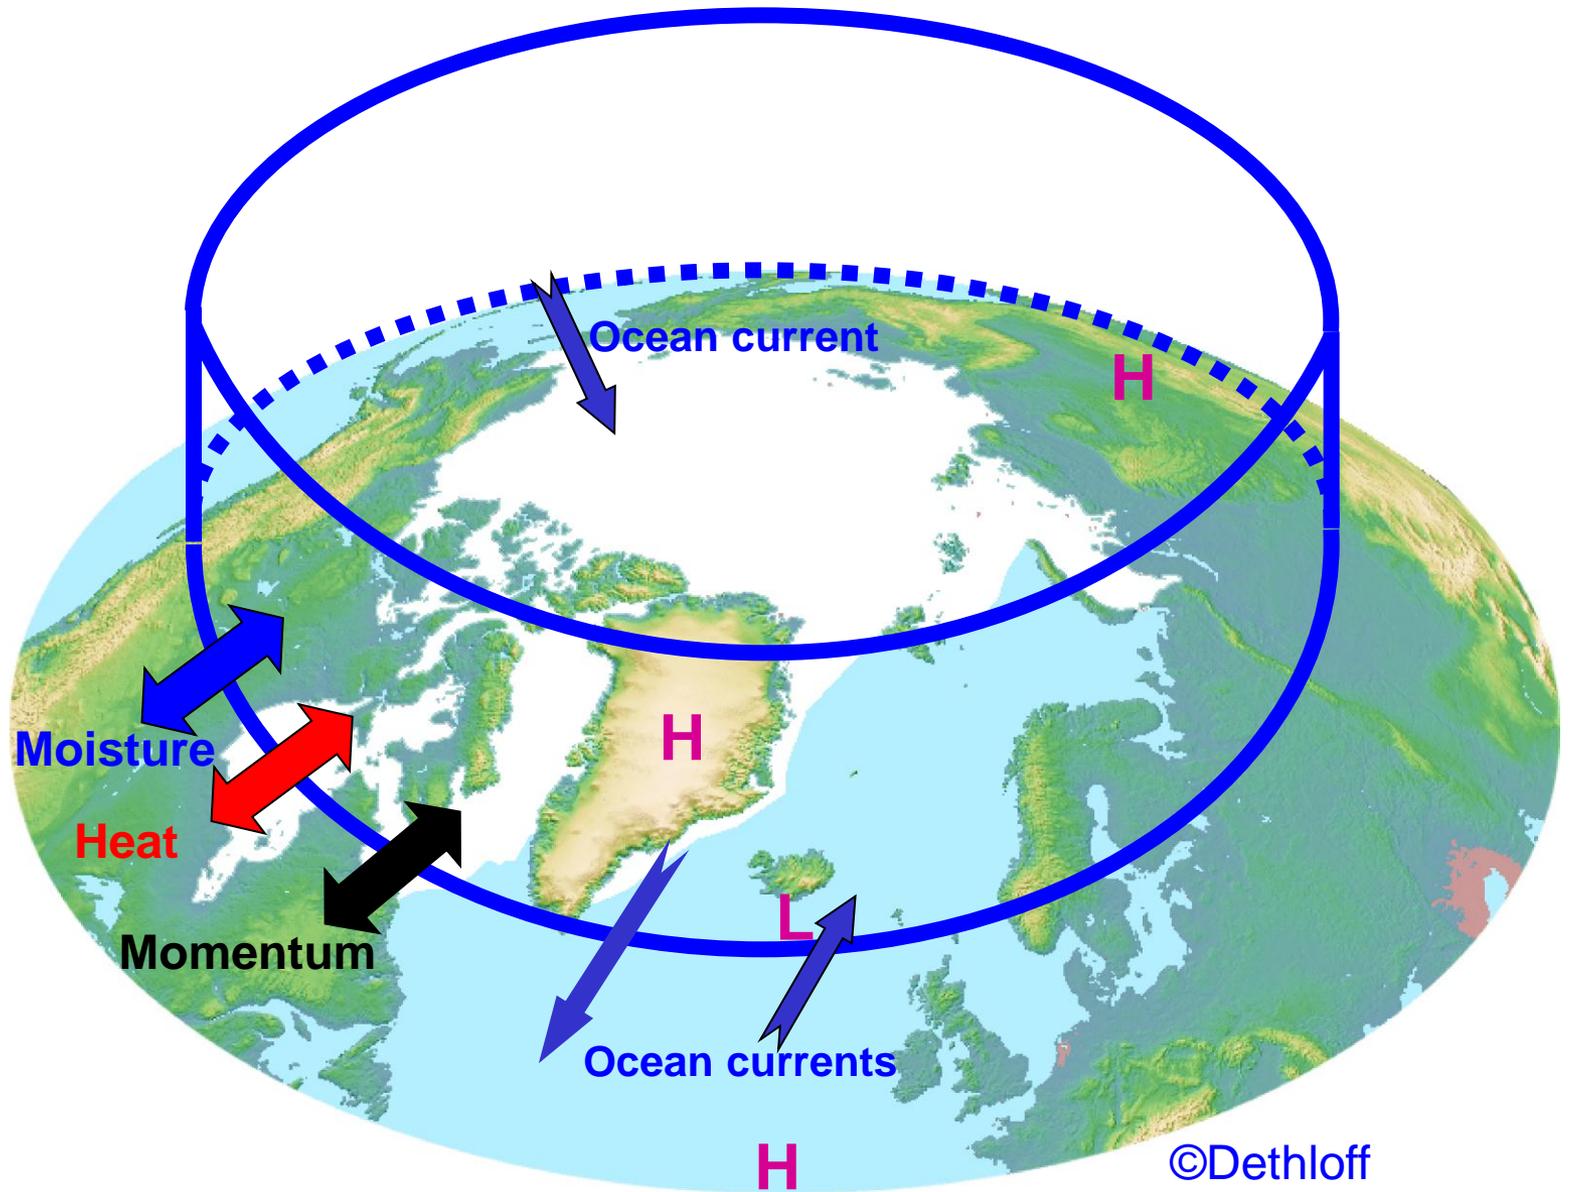

2021-2050

- 3 grader varmere i DJF og 2 grader i JJA
- Lokalt, op til 6 grader (4) langs V (Ø) kysten
- Iskappen: 2 grader

2051-2080

- 7-8 grader varmere i DJF og 3 grader i JJA
- Lokalt, op til 12 grader langs østkysten
- Iskappen: 3-4 grader

Stendel et al. (2008)

The DMI model system

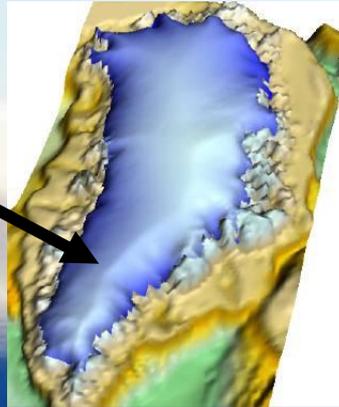

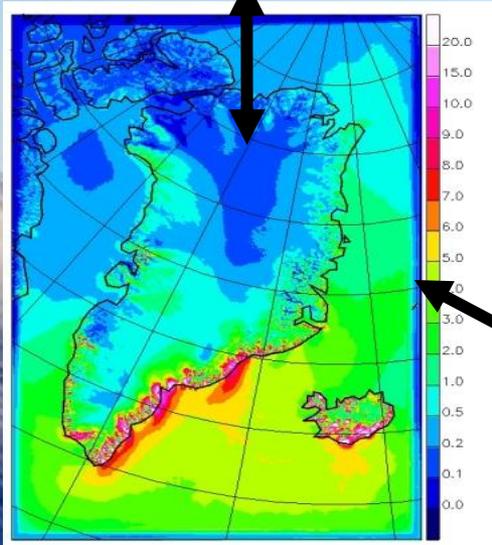

GCM forces RCM

Nordic CoE
DEFROST
SVALI

EC-EARTH
EU-project: COMBINE

PISM: parallel ice sheet model
University of Alaska Fairbanks

HIRHAM5
EU-project Ice2sea

2 GCM boundaries:
HadCM3, ECHAM
2 Scenarios: A1B, E1
200 years

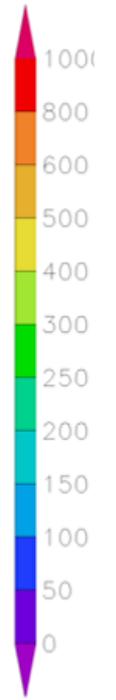

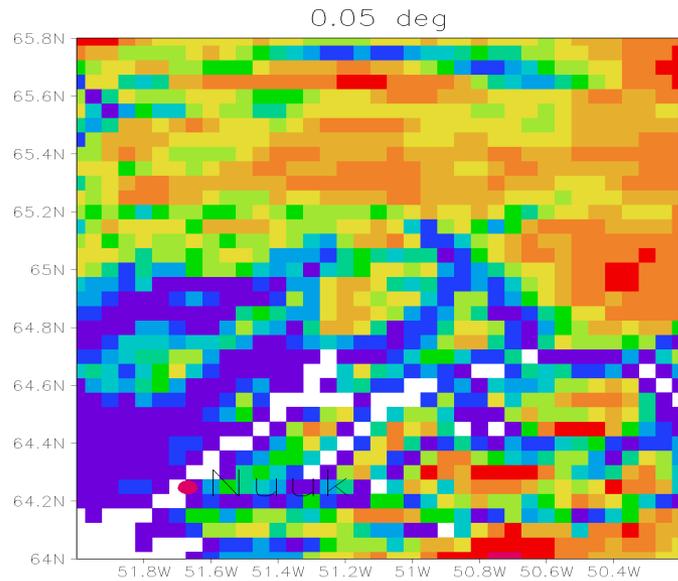

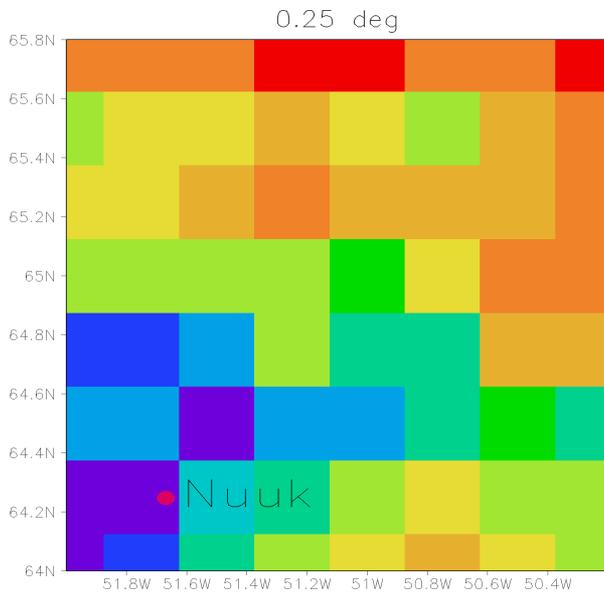

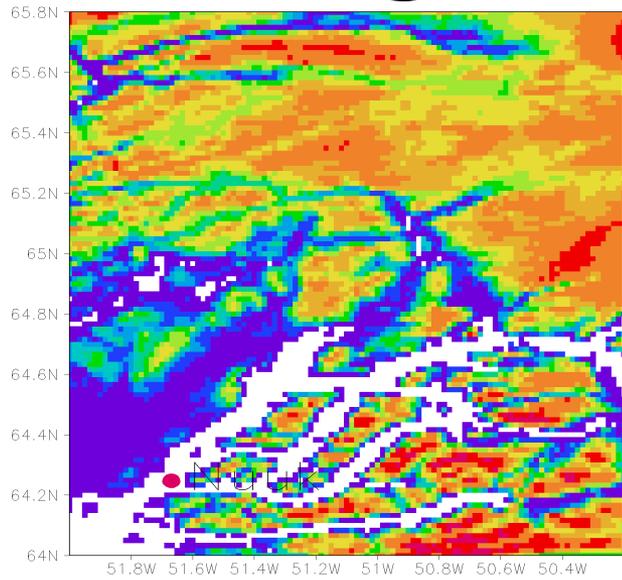

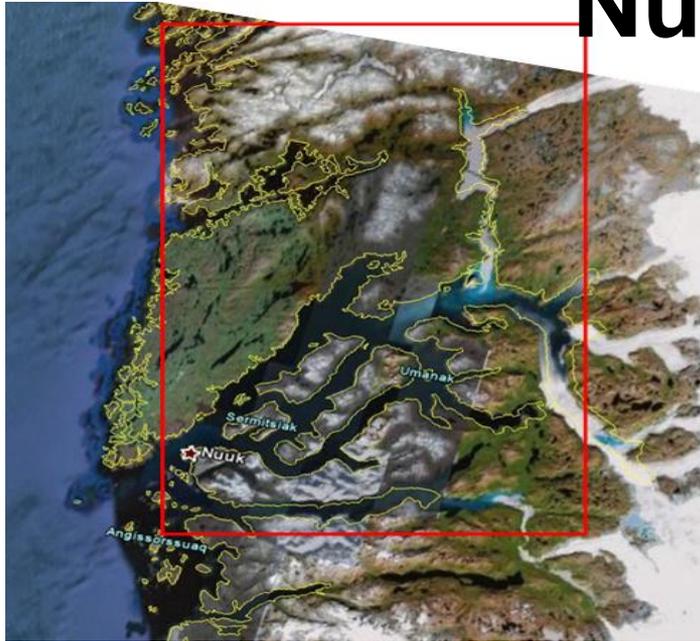

Regional sea level rise

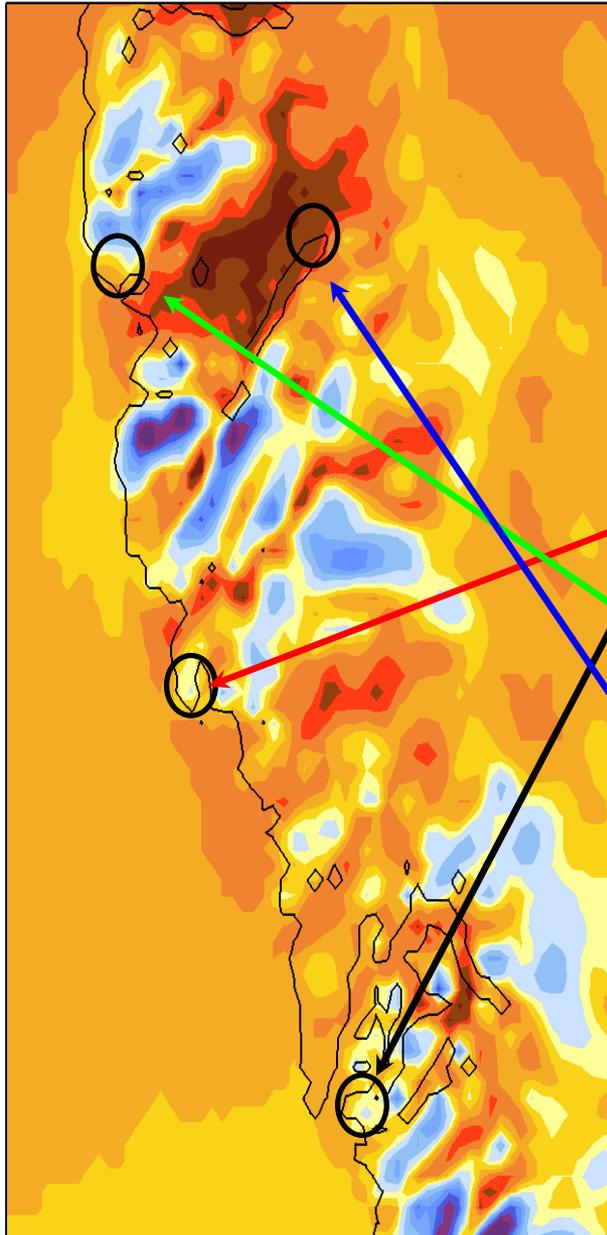

Nuuk setting

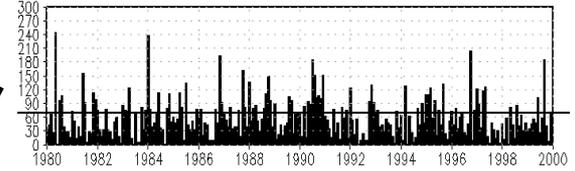

Precipitation verification

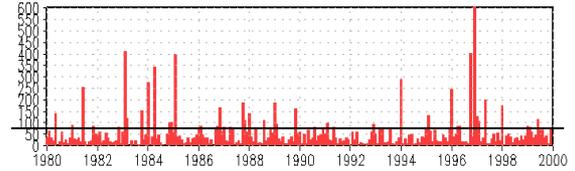

Total annual precipitation [mm] 1980-1989

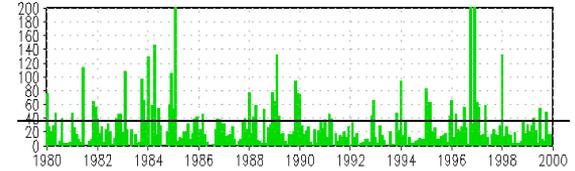

Nuuk monthly RR 1980-1999

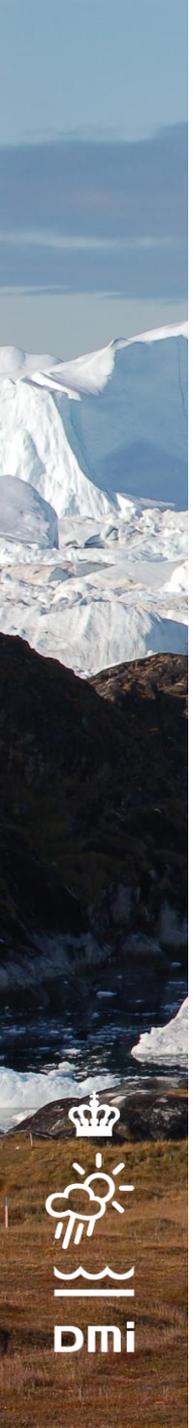

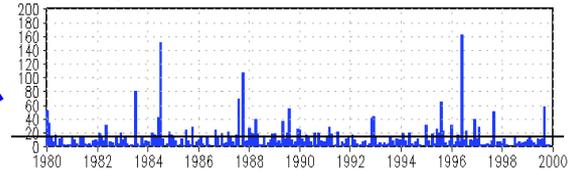

Maniitsoq monthly RR 1980-1999

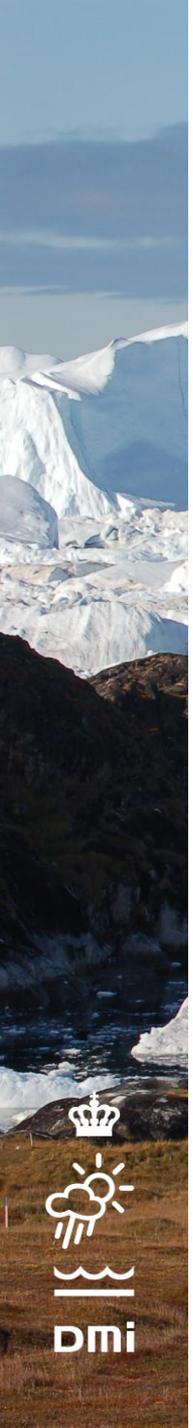

Sisimiut monthly RR 1980-1999

Kangerlussuaq monthly RR 1980-1999

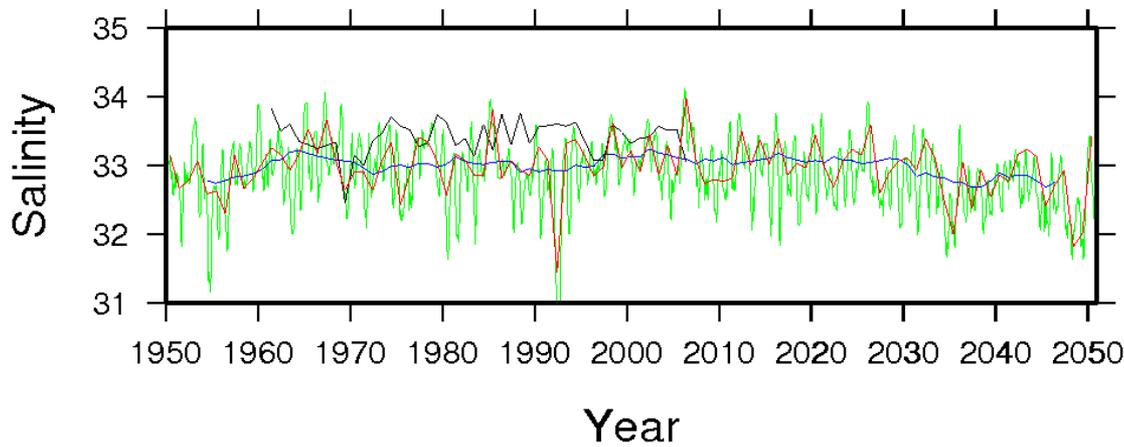

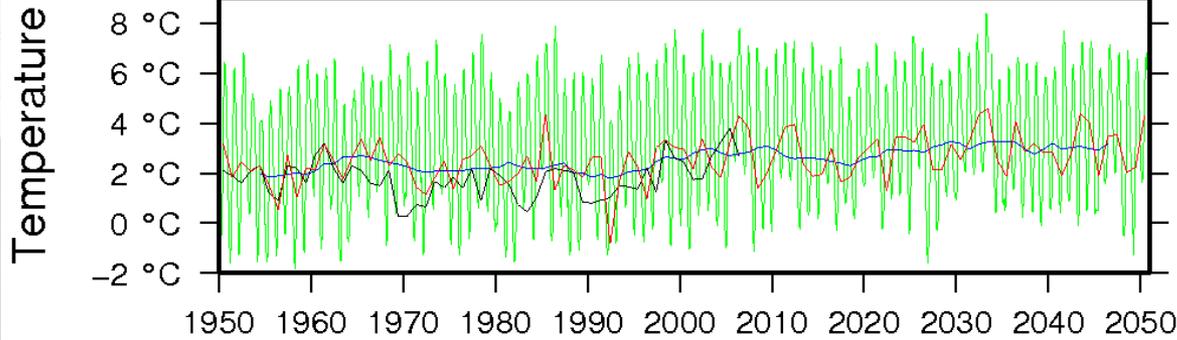

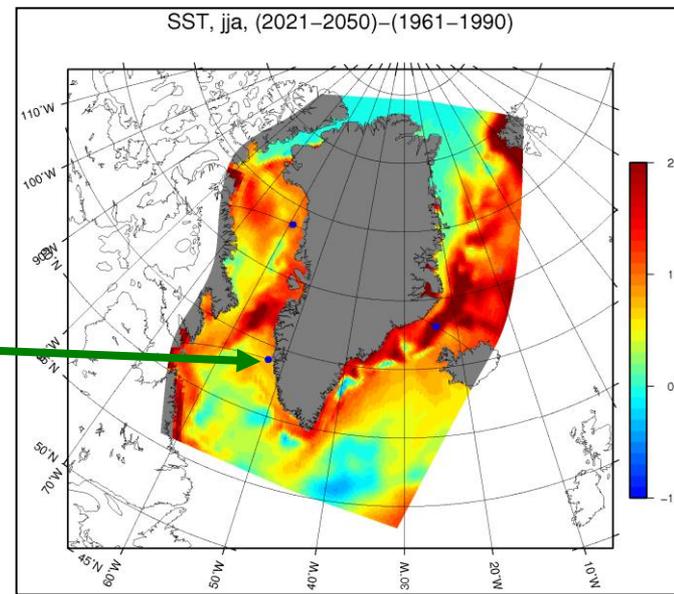

Ocean

The ocean

Fylla Bank, station 2, 0–40m

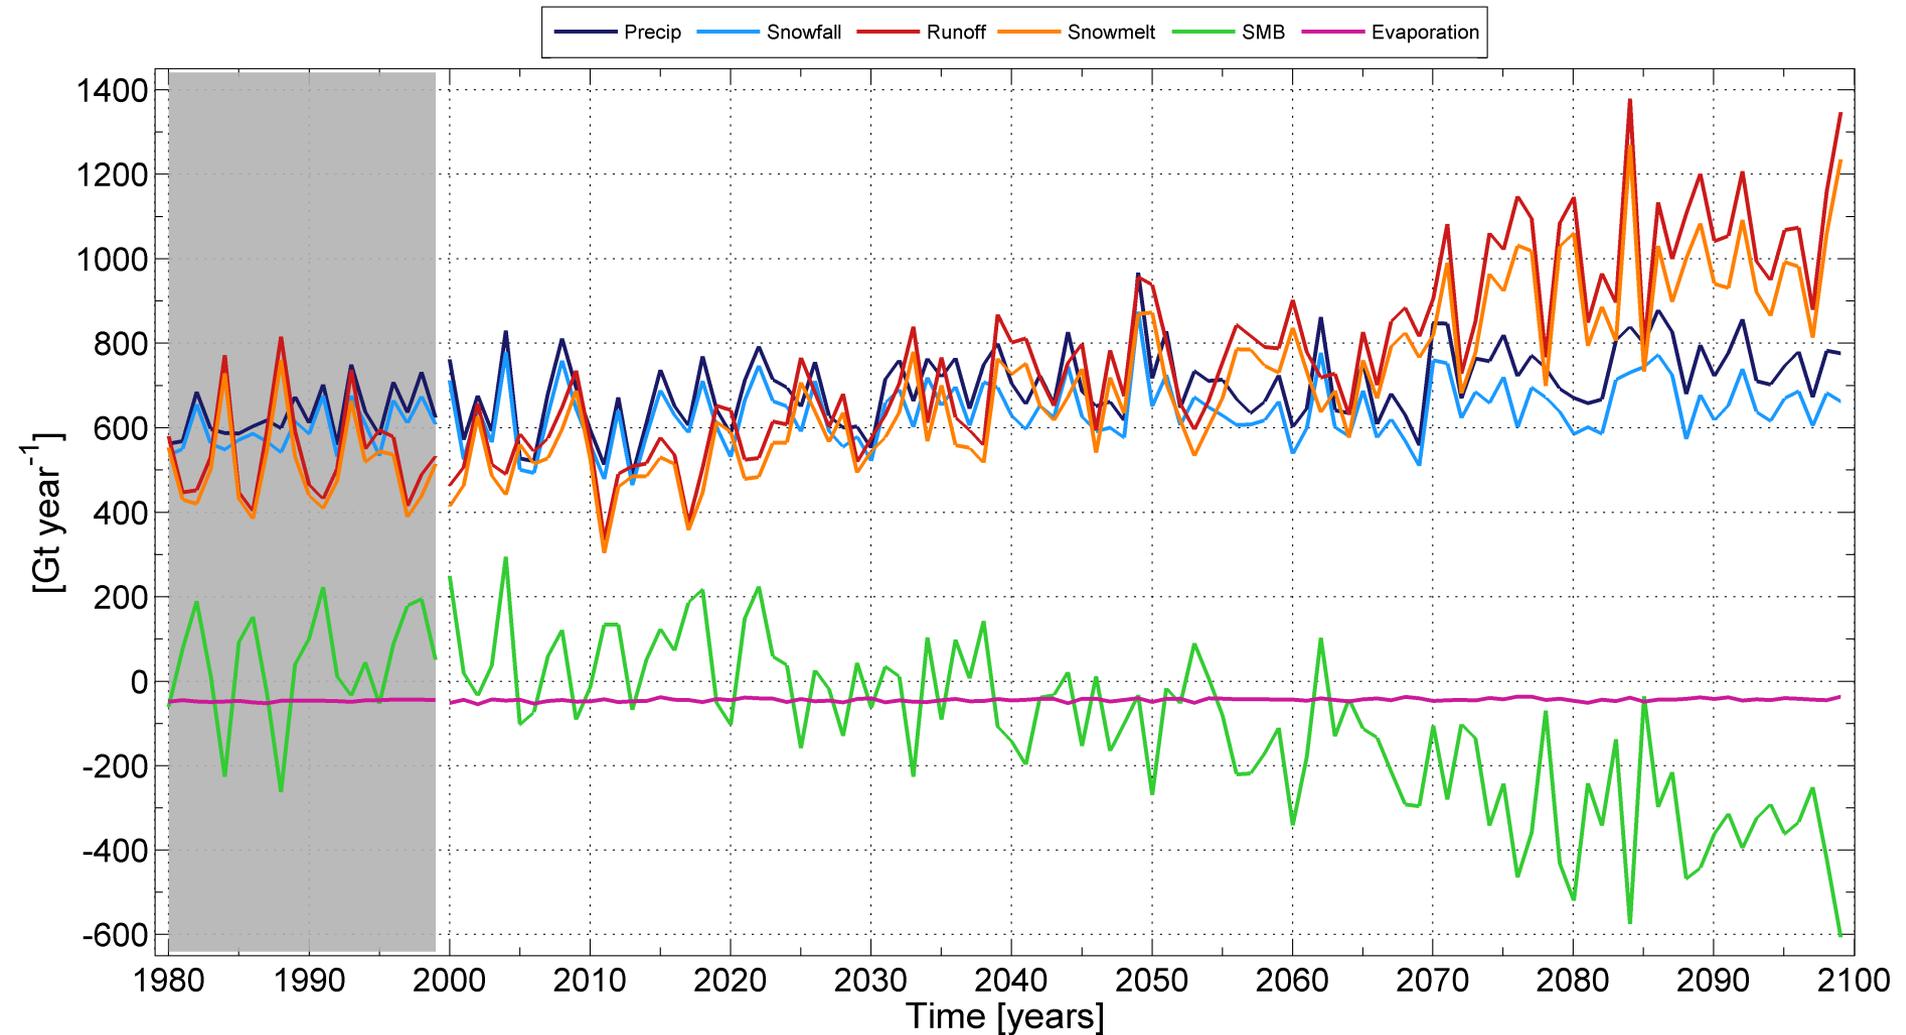

- Black: observed
- Green: all months
- Red: June
- Blue: June (averaged)

Ice Sheet

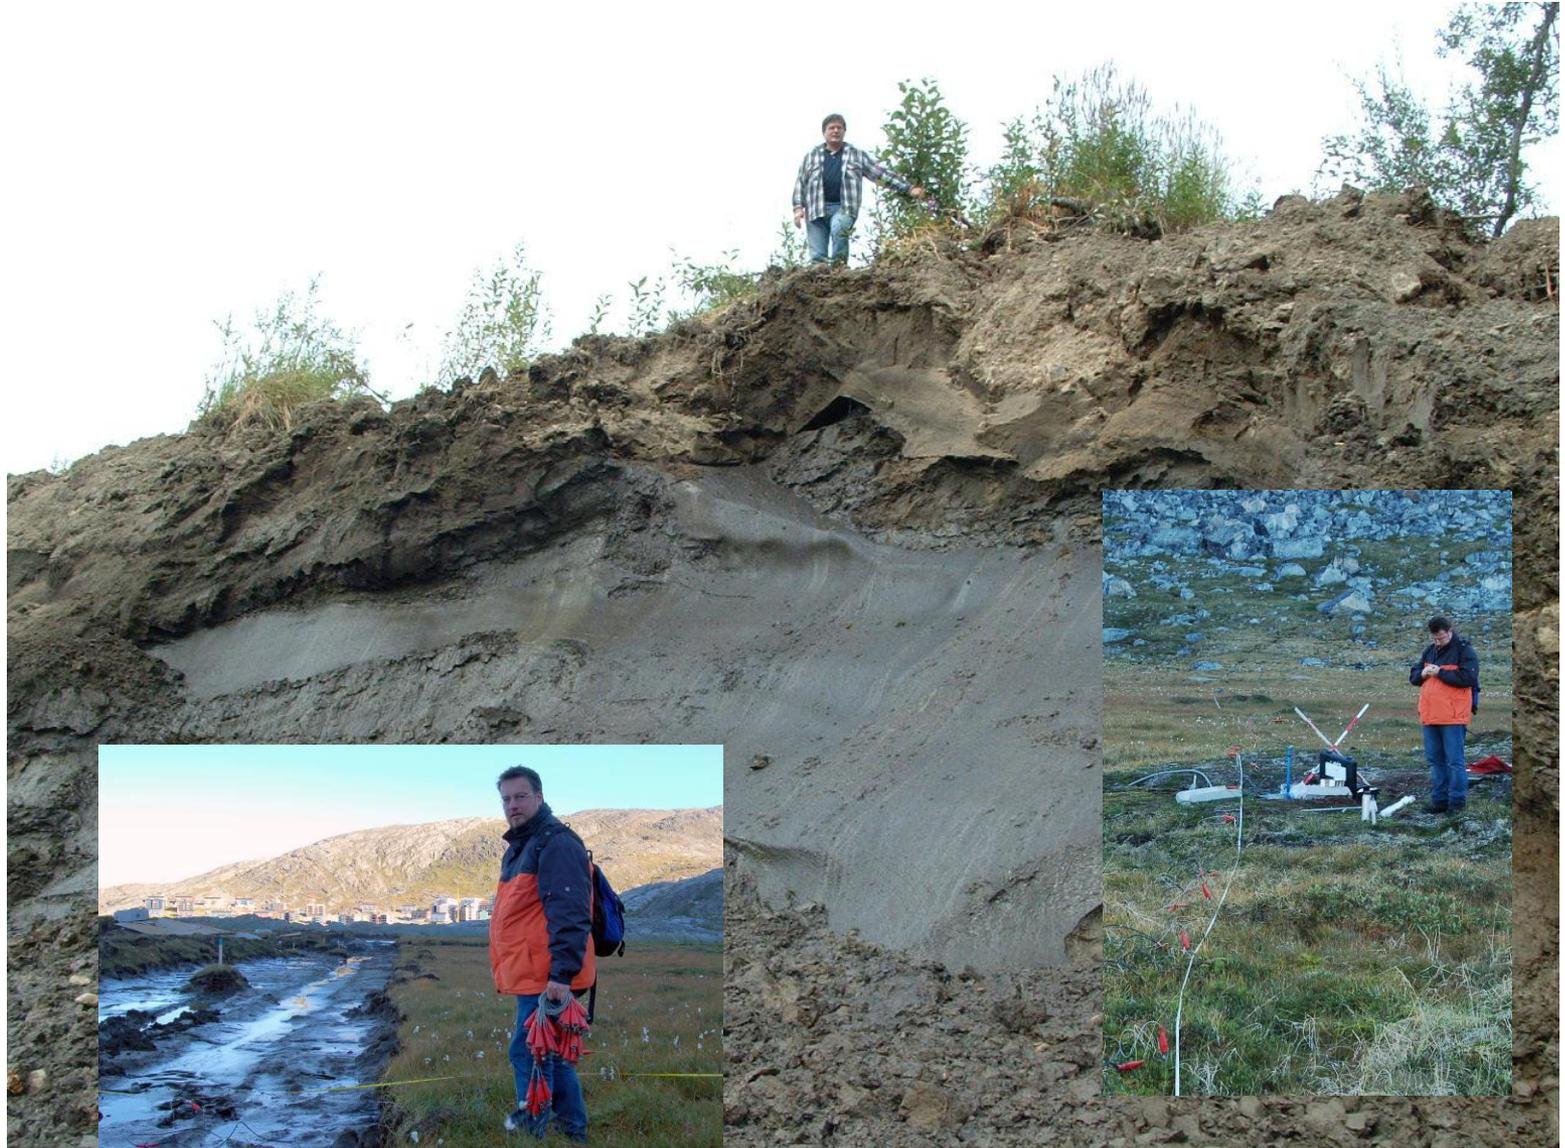

120 years run with ECHAM5 boundaries

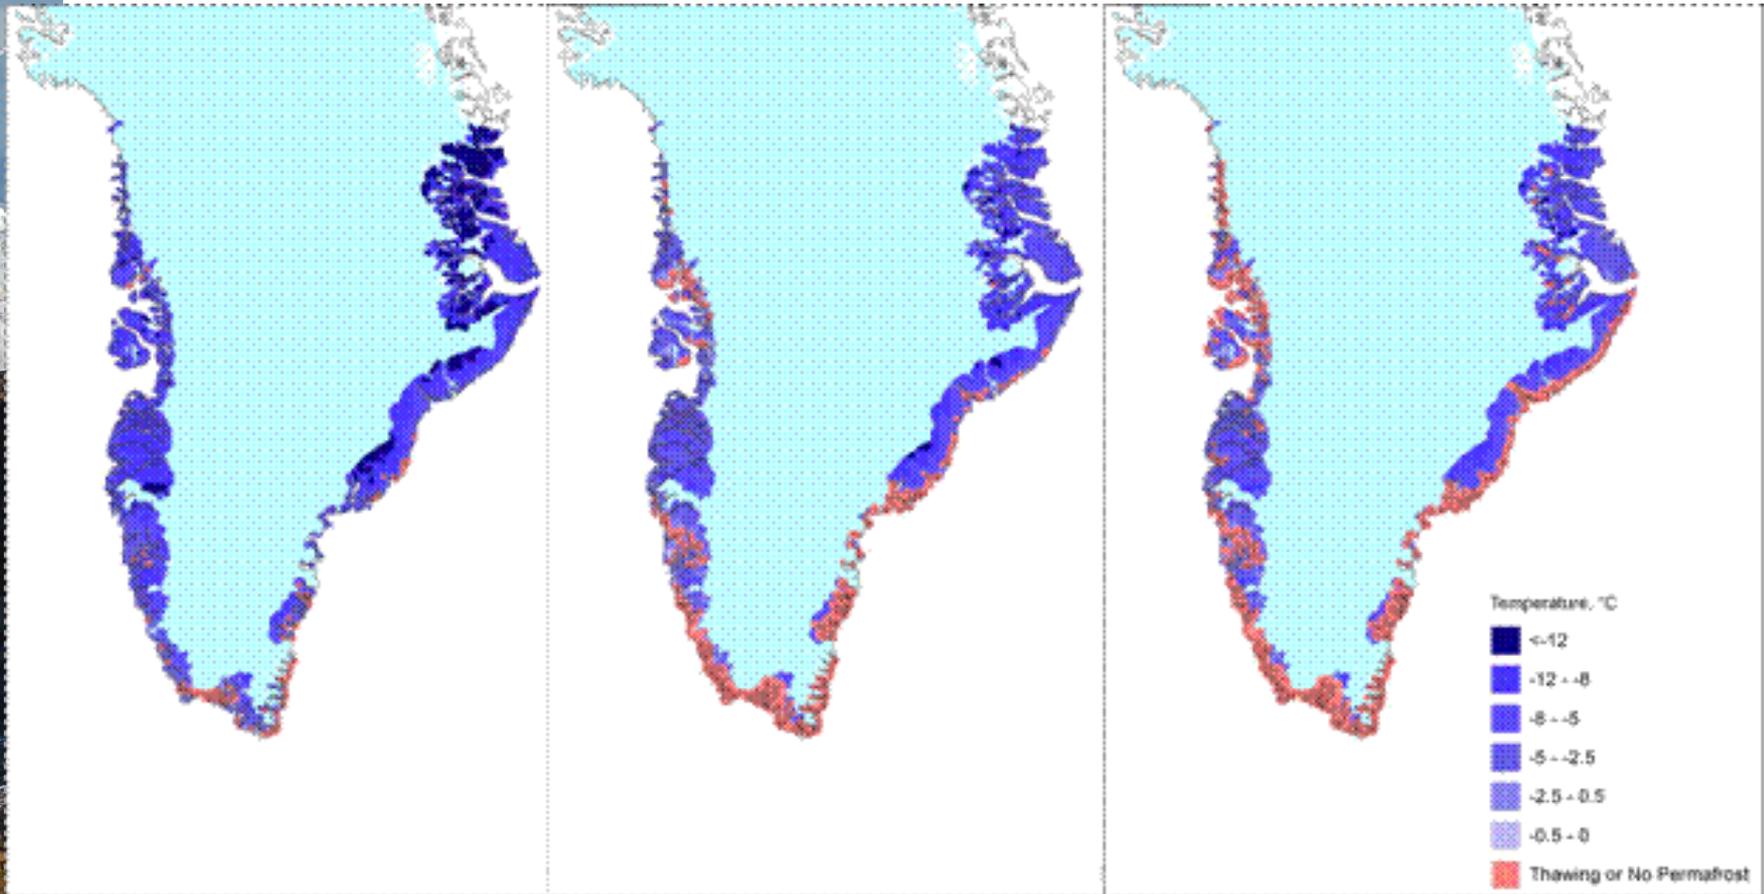

Permafrost

Asiaq; ARTEK; University Alaska, Fairbanks; DMI

Annual mean temperature at 1m depth with GIPL

1980-1999

2046-2065

2080-2099
